

# USB Flash Drives

A Flash Drive is a small self-powered drive that connects to a computer directly through a USB port. It's both Mac and PC compatible, so you can transfer files between both Macs and PCs. They are supported on all public machines, although some flash drives require a user to install drivers before use. Flash drives can hold any type of data, including excel, jpeg, video, and text files. Flash drives are also commonly referred to as key drive, thumb drives, jump drives, USB drives and pen drives.

Flash drives come with varying amounts of storage space.

## Copying files to a flash drive on a PC:

1. Go to Start/ **Computer (My computer in XP)** and see which drives are shown. Most computers, for example, have a hard disk such as a C: drive and a CD or DVD drive.
2. Insert the flash drive into the USB port and watch to see where the USB flash drive appears. Close any other windows which may appear as a result of your placing the flash drive into the computer. Most will appear as removable storage, but some will instead appear as hard drives. Note the name Windows is using to refer to the flash drive ("Removable Disk (G:)," for example). Close that window.
3. Open **Documents (My Documents XP)** or the location from which you want to transfer files to the flash drive. Select the **files** or **folders** you want to save to the flash drive by left-clicking on them. To select more than one, hold down the CTRL key while you click and select all of the files you wish to save.
4. **Right-click** on the file(s) or folder(s) you selected, then select **Send to**, then select the name you saw appearing in Computer for the flash drive ("Removable Disk (G:)," for example).
5. When the copying is finished, **do not immediately remove the flash drive from the USB port.**

Instead, left-click on the **Remove Hardware** icon located in the System Tray. A window containing a list of the USB devices will appear. Left-click on the **Safely Remove Mass Storage Device** line that matches your flash drive (for example, **Safely Remove Mass Storage Device - Drive(G:)**).

6. When you see the following message appear in the bottom left toolbar, it is, as it says, safe to remove the flash drive from the USB port; you may close the message or ignore it, as it will close itself automatically:

## Copying files from a flash drive on a PC:

1. Open **Computer (My Computer XP)** and see which drives are shown. Most computers, for example, have a hard disk such as a C: drive and a few removable storage devices such as a floppy drive, a CD-ROM drive, and perhaps a zip drive.

2. Insert the flash drive into the USB port and watch to see where the USB flash drive appears. Most will appear as removable storage, but some will instead appear as hard drives. Note the name Windows is using to refer to the flash drive ("Removable Disk (G:)," for example).
3. **Double-click** on the flash drive to locate the file(s) or folder(s) you want to copy to this computer. Select the **files** or **folders** you want to copy by left-clicking on them. To select more than one, hold down the CTRL key while you click and select all of the files or folders you wish to copy.
4. **Right-click** on the files or folders you have selected and choose **Copy**.
5. Open **Documents (My Documents XP)** or the location to which you want to transfer files from the flash drive.
6. Click on the **Edit** menu, then select **Paste**.
7. When the copying is finished, **do not immediately remove the flash drive from the USB port.**

Instead, left-click on the **Remove Hardware** icon located in the System Tray. A window containing a list of the USB devices will appear. Left-click on the **Safely Remove Mass Storage Device** line that matches your flash drive (for example, **Safely Remove Mass Storage Device - Drive(G:)**).

8. When you see the following message appear in the bottom left toolbar, it is, as it says, safe to remove the flash drive from the USB port; you may close the message or ignore it, as it will close itself automatically:

## How do I know if my Flash Drive is full?

Go to Start/Computer.  
 Right click on the flash Drive.  
 Go to Properties.  
 The blue section of the graph is used space.  
 The pink section is the unused space.

To remove files from the Flash drive – Go to Computer, locate the flash drive. Double click to open. Right click on a folder/file from the menu choose delete. To remove more than one folder/file hold down the Ctrl key whilst selecting then click delete on the keyboard.
