

Burning Music files from your computer to a CD. using Media Player 10 or 11

We are looking at Music you have downloaded to your computer legally, and wish to place on a CD in order to play on your home Audio Player. Locate the music files you are going to use.

Place the music files in a folder.

Open the folder in Media Player 10 or 11.

Click on the Burn button in the upper Menu bar.

The right side of the window should show the diagram opposite.

Place a new CD-R disc into the DVD/CD drawer of your computer. (do not use a formatted or RW disc) A new window will open as a result of your previous action. Close that particular window.

Select the files from the left hand side of the Media Player window, drag to the right hand side.

Tip: To select random files hold down the Ctrl button whilst selecting. To select consecutive files click on the 1st file then hold down the shift key and click on the last file.

Click on the Start Burn Button at the bottom of the left hand window.

Be patient. The process will burn your files to the CD and finalize the CD.

Happy burning and playing - Peggy
